by Arizona Instrument LLC

## AZI vs. the Competition

- We have our equipment housed in a steel casing which protects the heating elements and the balance. This means more precise readings and longer life. (15 to 20 years)
- The heating elements are made of nickel chromium, no glass. Customers won't have problems with the key pad, or display.
- [Free Sample Testing](#), [Free Trials](#), [Free Loaners](#)
- Problems with the competition:
  - Key pad
  - The heating elements crack and break
  - The balance cantilever arm bottoms out
  - The printer stops working
  - Length of time to get a repair back is long and sometimes that repair does not fix the problem
  - Display often goes out
  - Sometimes incur charges for loaners
